PROFESSIONAL SUMMARY

Results-driven Software Engineer with hands-on experience in mobile application development and cloud computing, specializing in Flutter, Dart, and AWS. Demonstrated ability to reduce development time by 100% and increase integration efficiency by 25% through cross-functional collaboration using Git. Awarded 1st place at an AI/Web Hackathon, outperforming 45 teams nationally. Seeking a remote Software Engineering or Contractor role at a fast-paced startup. Eager to leverage expertise in Flutter cross-platform development, serverless AWS architectures, and rapid product prototyping to ship impactful, production-ready features.

TECHNICAL SKILLS

Languages:	Dart, Python, C/C++, JavaScript, SQL
Mobile Development:	Flutter, Cross-Platform Mobile App Development, Widget Architecture
Cloud & DevOps:	Amazon Web Services (AWS), AWS Lambda, Amazon DynamoDB, Amazon EC2, Amazon SQS, AWS CloudFormation, Infrastructure as Code (IaC)
Backend & Cloud Infrastructure:	Firebase (Firestore, Cloud Functions (Node.js), FCM, Storage), REST APIs, Serverless Architecture
Tools & Testing Frameworks:	Git, GitHub, GitHub Classroom, Automated Testing, OOP, Object-Oriented Design, Data Structures, Microsoft Office

WORK EXPERIENCE

Flutter Development Intern

June 2025 – August 2025

Granjur Technologies — Front-End Department

- Developed cross-platform mobile interfaces using Flutter and Dart, reducing development time by 100% and accelerating feature delivery cycles.
- Increased API integration efficiency by 25% by collaborating asynchronously with a team of 10 developers using Git-based workflows, structured code reviews, and Agile sprint documentation, resulting in faster deployment pipelines.
- Improved UI responsiveness by implementing reusable widget components, enhancing maintainability and user experience across Android and iOS platforms.

Teaching Assistant — Data Structures & Algorithms

February 2026 – Present

Information Technology University — Lahore, Pakistan

- Redesigned lab assignment pipeline using GitHub Classroom, boosting student productivity by 200% through automated submission and grading workflows.
- Implemented automated testing using GitHub Actions CI (2,000 minutes/month) with the Catch2 C++ framework, reducing manual grading effort and ensuring consistent evaluation.
- Mentored undergraduate students in software engineering principles including object-oriented design, data structures, and version control best practices.

PROJECTS

EduStream – Cloud-Based Learning Management System *January 2024 – February 2024 AWS*

Architecture Project | Flutter, AWS Lambda, DynamoDB, EC2, SQS, CloudFormation, FFmpeg

- Architected a hybrid-cloud Video LMS serving cross-platform clients (Flutter), integrating AWS Lambda for REST APIs and Amazon DynamoDB for sub-millisecond metadata retrieval.
- Engineered an asynchronous video transcoding daemon on Amazon EC2 (Ubuntu) using FFmpeg to process HD media files, reducing client-side API blocking latency by 85%.
- Decoupled video ingestion from heavy processing using Amazon SQS, eliminating Head-of-Line blocking and preventing server crashes during high-traffic uploads.
- Automated infrastructure provisioning with AWS CloudFormation (Infrastructure as Code), ensuring 100% reproducible environments across networking and compute stacks.

Tayyab Chat – Real-Time Cross-Platform Messaging Application *January 2023 – February 2023*

Flutter, Firebase Firestore, Firebase Cloud Functions (Node.js), FCM, Firebase Storage

- Built a real-time global broadcast chat application (Web, iOS, Android) using Flutter with sub-100ms message synchronization via Cloud Firestore WebSocket streams.
- Engineered a serverless push notification pipeline using Firebase Cloud Functions (Node.js) with onDocumentCreated triggers, automating 100% of push notification payloads.
- Solved web-client FCM topic subscription limitations by architecting a custom HTTPS callable Cloud Function, ensuring seamless Firebase Cloud Messaging delivery across all platforms.
- Implemented secure user authentication and cross-platform profile image handling using Firebase Storage and Uint8List byte-streams for Web and Mobile compatibility.

EDUCATION

Bachelor of Science in Software Engineering

September 2022 – May 2027 (Expected)

Information Technology University — Lahore, Pakistan

- Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Cloud Computing, Mobile Application Development, Software Engineering Principles, Database Systems.

CERTIFICATIONS & ACHIEVEMENTS

1st Place – AI & Web Hackathon (Aurex)

2024

Bahria University, Islamabad — Competed against 45 teams from across Pakistan.

- Led team to 1st place by designing and deploying a full-stack AI-powered web application under time constraints, demonstrating strong problem-solving and rapid prototyping skills.
